

SAVI®

Site Assessment Validation Indicator

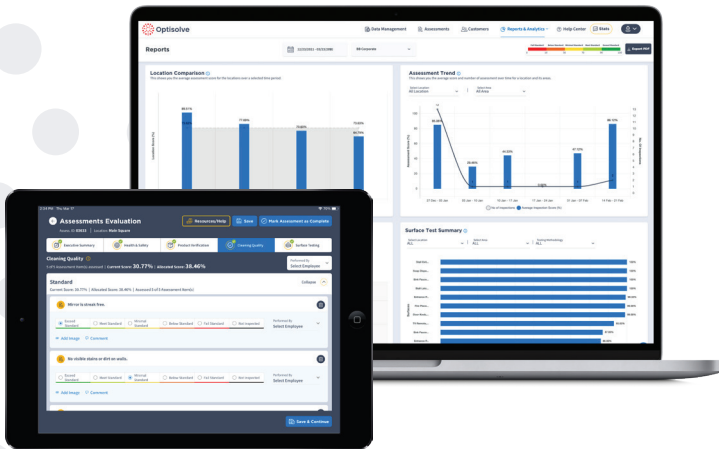

Optisolve SAVI® is a cloud-based quality management system that enables facility teams to plan, conduct, track and report site assessments for health and safety, cleaning quality, product verification and surface testing. Using feedback gathered in SAVI, facility managers can design and implement evidence-backed proactive and preventative solutions for environmental health & safety.

How SAVI® Works

SAVI is configurable to meet your organization's needs, requirements, and is designed to get you started quickly and effectively.

With benchmarks and protocols documented and easy to access, staff can provide cleaning and disinfection assessments on-site, in real-time, and share data with stakeholders across the facility.

Save time and money with standardized assessments.

Routine site assessments provide data that can include checking compliance items by visual observations and ATP monitoring as well as testing surfaces with advanced methodologies such as our award-winning Optisolve Pathfinder™ imaging technology.

Ensure positive workplace and customer experiences that advance your business.

Cleaning protocols, processes, and products are frontline in employee experience and business performance, helping companies and institutions mitigate risk, drive productivity and improve your brand reputation.

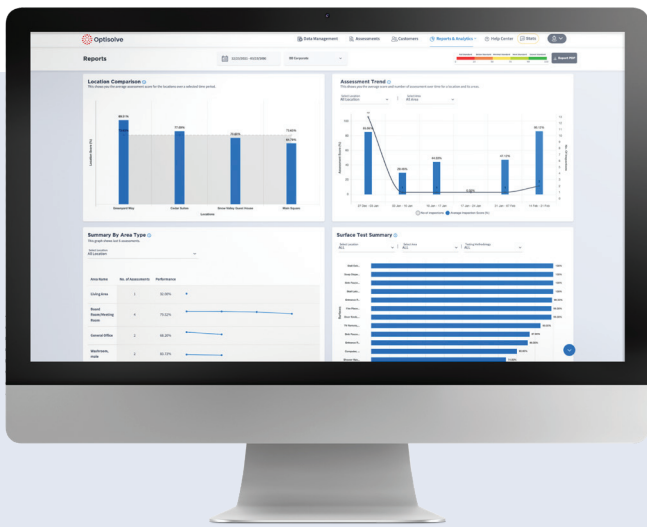

Give executives, employees and customers peace of mind.

SAVI gives facilities a cleaning analytics platform which allows a completely new view of cleaning operations. Reports and dashboards communicate results clearly and cleanly. Share high-level feedback with your team, managers and customers to demonstrate and deliver clean, healthy and safe spaces.

Empower your people, products and processes with precision cleaning.

Improve your training with visual assessment tools that provide your team with easy to understand feedback and easy to follow instructions, creating a culture of continuous quality improvement.

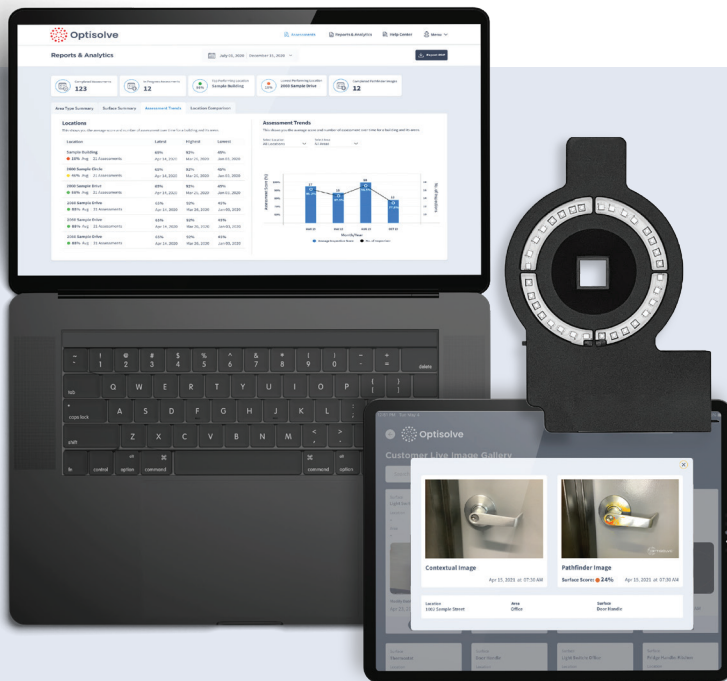

Why SAVI Works

Experts agree that careful cleaning and disinfection of environmental surfaces are essential elements of effective infection prevention programs. When we identify risk in the environment, and target it with precision cleaning and corrective action, we are one step in the right direction to stop the spread of infection. This can save economic and social burden, and helps optimize environmental service cleaning and disinfection resources.

Clean Systems, Clean Facilities.

"I found Optisolve® a valuable tool for us because it helps us to validate our great cleaning program that we have. We have used the results of the audit as a teaching tool for our custodial staff to show them not only how good of a job that we're doing, but areas that need more attention."

Senior Manager, Custodial and Support Services

Complete the System

With Optisolve's Pathfinder™ Surface Imaging Technology facility managers and cleaning teams have a powerful tool to assess surfaces for contamination. Pathfinder uses our SAVI software to process the images. The results are provided in both digital dashboards and PDF report formats.

The combination of Optisolve Pathfinder and Optisolve SAVI provides an auditing system to efficiently automate, assess, analyze and communicate results to assure productivity for clean, healthy, safe spaces. Our comprehensive platform gives customers the technology and tools for enhanced precision cleaning. Taking the guesswork out of the cleaning the process, reducing overall time and risk.

Clean Smarter
